Noise - 2013-10-15 What if history had a sound track? What would it tell us about ourselves? Based on a thirty-part BBC Radio series and podcast, Noise explores the human dramas that have revolved around sound at various points in the last 100,000 years, allowing us to think in new frames about the meaning of our collective past. We might see ourselves inhabiting a visual world, our lives have always been heavily influenced by our need to hear and be heard. To tell the story of sound—music and speech, but also echoes, chanting, drumbeats, bells, thunder, gunfire, the noise of the crowds, the rumbles of the human body, laughter, silence, conversations, mechanical sounds, noisy neighbors, musical recordings, and radio—to explain how it has shaped the course of our past, it's perhaps even to control it; how we learned to communicate with, and understand alongside our fellow beings; how we've fought with one another for dominance; how we've sought to find privacy in an increasingly noisy world; and how we've struggled with our emotions and our sanity. Oratory in ancient Rome was important not just for the words spoken but for the sounds made—the tone, the cadence, the pitch of the voice—these might have been transformed by the environment in which it was heard and how the audience might have responded to it. For the Native American tribes first encountering the European colonists, to hear one’s voice echoed by earth, water, or sky was a different sense experience than the same sounds would have been in the English countryside, and it might have seemed like a threat.

Mardi Gras, fewer know of Bermuda's Gombey dancers, Bahamian Junkanoo, Dangriga’s Jankunú and Charikanari, St. Croix’s Crucian Christmas Festival, and St. Kitts’s Sugar Mas. One Grand Noise: Boxing Day in the Anglicized Caribbean World delivers a highly detailed, thought-provoking examination of the use of spectacular vernacular to metaphorically dramatize such tropes as “one grand noise,” “foreday morning,” and from “back o’ town.” In cultural solidarity and an obvious critique of Western values and norms, revelers engage in celebratory sounds, often donning masks, cross-dressing, and dancing with abandon along thoroughfares usually deemed anathema to them. Folklorist Jerrilyn McGregory demonstrates how the cultural producers in various island locations ritualize Boxing Day as a part of their struggles over identity, class, and gender relations in accordance with time and space. Based on ethnographic study undertaken by McGregory, One Grand Noise explores Boxing Day as part of a creolization process from slavery into the twenty-first century. McGregory traces the holiday from its Egyptian origins to today and includes chapters on the Gombey dancers of Bermuda, the evolution of Junkanoo/Jankunú in The Bahamas and Belize, and J’ouvert traditions in St. Croix and St. Kitts. Through her exploration of the holiday, McGregory negotiates the ways in which Boxing Day has expanded from small communal traditions into a common history of colonialism that keeps alive a collective spirit of resistance.

Atmospheric Noise—Marina Peterson 2021-02-05 In Atmospheric Noise, Marina Peterson traces entanglements of environmental noise, atmosphere, sense, and matter that cohere in and through encounters with airport noise since the 1960s. Exploring spaces shaped by noise around Los Angeles International Airport (LAX), she shows how noise is a way of attuning toward the atmospheric: through noise we learn to listen to the sky and imagine the permeability of bodies and matter, sensing and conceiving that which is diffuse, indefinite, vague, and unformed. In her account, the “atmospheric” encompasses the physicality of the ephemeral, dynamic assemblages of matter as well as a logic of indeterminacy. It is audible as well as visible, heard as much as breathed. Peterson develops a theory of “indefinite urbanism” to refer to marginalized spaces of the city where concrete meets sky, windows resonate with the whine of departing planes, and endangered butterflies live under flight paths. Offering a conceptualization of sound as immanent and non-objectified, she demonstrates ways in which noise is central to how we know, feel, and think atmospherically.
