Discourse and Practice—Theo van Leeuwen 2008-05-01 Adding a new introduction and two previously unpublished papers, Discourse and Practice: New Tools for Critical Discourse Analysis brings together van Leeuwen’s methodological work on discourse analysis of the last 15 years. Discourse, van Leeuwen argues, is a resource for representation, a knowledge about some aspect of reality which can be drawn upon when that aspect of reality needs to be represented. In van Leeuwen’s model, there are three major components of the text: the language, the micro-level of discourse which is the linguistic form of the text, the macro-level of discourse, which is the meaning or message of the text. van Leeuwen examines the linguistic implications of micro-level and macro-level of discourse and investigates the ways in which these are related. van Leeuwen also provides an introduction to critical discourse analysis.

modern classic. In this wide-ranging, intellectually vigorous study, Said traces the origins of “orientalism” to the centuries-long period during which Europe dominated the Middle and Near East and, from its position of power, defined “the orient” simply as “other than” the occident. This entrenched view continues to dominate western ideas and, because it does not allow the East to represent itself, prevents true understanding. Essential, and still eye-opening, Orientalism remains one of the most important books written about our divided world.
