Objects are dictionary-like collections of keys and values. The keys have to be unique. They are similar to arrays and are also sometimes called associative arrays. However, an array uses numbers to index the values, whereas an object allows you to use any other type as the key. In TypeScript, an Object type refers to any value with properties.

About Sleep's Role in Memory

Likewise, in studies of novel object recognition, novel place object recognition, and temporal order tasks, retention of the place and time of an event was found to require sleep after the learning phase, whereas the retention of the event per se (item recognition) did not require sleep (e.g., Refs. 92 and 593, but see Ref. 882).
