Instinct - Wikipedia
Instinct is the inherent inclination of a living organism towards a particular complex behaviour, containing both innate (inborn) and learned elements. The simplest example of an instinctive behavior is a fixed action pattern (FAP), in which a very short to medium length sequence of actions, without variation, are carried out in response to a corresponding clearly defined stimulus.

Cannibalism is an occasional result of a stillborn litter, and this is nature's way of cleaning up the "mistake." The activity and noisy squeaking of healthy babies trigger the "maternal instincts." Only rarely does a mother rabbit truly abandon or ignore her babies.

What I Want My Daughter To Know As She Enters College
Oct 13, 2016 · We celebrate the things that make our children unique and wonderful. We laugh with them and cry with them. Sometimes we even cry for them. We endure sleepless nights, papier-mâché elephants, swimming lessons, and broken curfews. We keep them as safe as we can, clinging to their little hands and teaching them to look both ways before crossing the street.

Nature vs. Nurture: Evidence for Social Learning of
Nov 16, 2016 · The propensity for a grizzly bear to develop conflict behaviours might be a result of social learning between mothers and cubs, genetic inheritance, or both learning and inheritance. Using non-invasive genetic sampling, we collected grizzly bear hair samples during 2011–2014 across southwestern Alberta, Canada. We targeted private agricultural lands for hair samples at grizzly bear incident.

Wolf Spiders | Missouri Department of Conservation
Wolf spiders are members of the family Lycosidae. These are athletic spiders that don’t spin webs to catch their prey; instead, they run it down. They have long legs and are usually gray, brown, black, or tan with dark brown or black body markings (especially stripes). A female wolf spider carries her egg sac in a unique way: She attaches it to her spinnerets at the bottom rear of her abdomen.
