Practical Electric Motor Handbook- Irving Gottlieb 1997-08-21 Experienced product designers are increasingly expected to be adept at incorporating a range of components into their designs. Students and experimenters too need to look beyond basic circuits and devices to achieve adequate design solutions. For those experienced in engineering design, this is the guide to electric motors. This book will allow engineers and designers to marry the technologies they know about with motor technology, and hence to incorporate motors into their products. Of the many good books on motors, such as Electric Motors and Drives by Hughes, none offer the engineering professional a tailored guide to motors taking into account their expertise. This book fills that gap. Irving Gottlieb is a leading author of many books for practising engineers, technicians and students of electronic and electrical engineering. Practical approach with minimum theory Covers a core area ignored by many electronics texts Shows how to incorporate motors into electronic products

Civilization and the Human Subject- John Mandalios 1999-01-01 Recent debates have highlighted the importance of the self to a better understanding of the nature of culture and its relation to power. In his new book, John Mandalios incorporates the current 'postmodern' debate on these issues with a deeper, philosophical exploration of identity and cultural formation, and the dynamics of social power underlying them. He takes up identity formation within an analysis of the historical, social, political, religious, and psychoanalytical dimensions of civilized life that can be traced back to the classical world. Questions ordinarily associated with the 'postmodern condition' otherness, fragmentation, power, the situated self, disciplinary practices, and multiplicity are related to the problematic of human subjectivity and how civilized modes of conduct of the self cannot simply be explained by national cultural traditions. Mandalios argues that self-identity is not reducible to the effects of globalization or power or any one single collective identity representation. The self is enveloped within a complex which requires a 'civilization-analytic' perspective into the world and the inner life.

My Vietnam War- E.E. "Doc" Murdock 2013-08-12 Writers have been writing about war since the siege of Troy, but few, if any, have captured the first-person experience of war as deeply as My Vietnam War. Set in 1967 (the deadliest year of the Vietnam War), this memoir-style novel depicts the psychological journey of a young man whose carefree days of studying philosophy at the university are ended by the draft. The story follows him from his initial rear-echelon assignment in Saigon, where he falls for a mysterious storytelling bar girl, to his eventual posting at an isolated front-line firebase in one of the deepest parts of the Vietnam jungle. While recovering from a leg wound (he is hit by a piece of bone from a fellow soldier who stepped on a booby trap mine), he becomes the assistant medic and sees the horrors of war close up. The experience begins his steady spiral down into PTSD. After he is seriously wounded, he ends up back in Saigon where, after an old friend from Arizona gets him involved in the underground drug trade, the mysterious bar girl may be his only hope for salvation. It is a powerful story, well-written, with vivid detail that you will never forget.
Black Lotus 2: The Vow- K'wan 2020-11-03 After the death of a police officer, assassin Kahliah (aka the Black Lotus) is forced out of retirement in an attempt to clear her name while outrunning a mysterious enemy. "K'wan delivers a lean, tightly plotted tale that balances noir aesthetics with comic book flair. Fans of pulp and urban lit will be well satisfied." --Publishers Weekly "From page one to the last, K'wan's Black Lotus 2: The Vow is a high-wire act with no net. A smart refiguring of hard-boiled with a nitro injection of new-age sensibilities." --Reed Farrel Coleman, New York Times best-selling author of Walking the Perfect Square "Like a cool, hip, and fun evening at a vintage drive-in, Black Lotus 2: The Vow takes me back to a time when Jim Kelly, Pam Grier, and Fred Williamson graced the big screen. Throw in some Bruce Lee and a little The Last Dragon and you have a hell of a butt-kicking, action-filled ride." --Ace Atkins, New York Times best-selling author of The Shameless "Black Lotus 2: The Vow is a thrilling roller-coaster ride of a mystery that kept me on the edge of my seat!" --Bernice L. McFadden, author of The Book of Harlan It's been months since Kahliah El-Amin, aka the Black Lotus, hung up her pistols, retired from the murder-for-hire business, and finally found peace. But when a police officer is murdered and a familiar flower is left at the crime scene, all signs point to it being the work of the Black Lotus. Someone is trying to frame her. Things get more complicated when the case is handed to Detective James Wolf, a former adversary who has since become a friend. To clear her name, Kahliah is forced out of retirement and once again must don the mask of the Black Lotus. Structural Elements Design Manual-Trevor Draycott 2014-05-12 Structural Elements Design Manual is a manual on the practical design of structural elements that comprise a building structure, namely, timber, concrete, masonry, and steel. Practical guidance on the design of structural elements is provided in accordance with the appropriate British Standard or Code of Practice. Plenty of worked examples are included. Comprised of five chapters, this book begins with an overview of interrelated matters with which the structural engineer is concerned in the design of a building or similar structure. The British Standards and Codes of Practice are also considered, along with loading, structural mechanics, and theory of bending. The discussion then turns to timber, concrete, masonry, and steel elements, with emphasis on safety considerations and material properties. This monograph should prove useful not only to students of structural and civil engineering, but also to those studying for qualifications in architecture, building, and surveying who need to understand the design of structural elements.

Heavy Duty Equipment Mechanic-Canada. Interprofessional Partnerships and Occupational Information Division 1998 This analysis identifies tasks that a qualified heavy duty equipment mechanic is called upon to perform in Canada. The equipment is typically found in the fields of construction, transportation, natural resources, and materials handling. The analysis identifies tasks and sub-tasks performed by such a mechanic, arranged in blocks of distinct operations relevant to that occupation. These blocks include workplace safety, work practices and procedures, and tasks related to internal combustion engines, power trains, electrical and electronic systems, hydraulic and hydrostatic drive systems, pneumatics, steering systems, suspension and braking systems, frames, chassis, wheels and tracks, attachments, and ground-engaging and working tools. For each task, the document outlines the element of skill and knowledge needed to perform the task adequately, identifies any shifts or changes in technology that affect the task, lists tools and equipment required for the task, and provides an indication of whether the task has been validated by each province and territory. The appendix includes a list of tools and equipment used in the occupation, and a tabulation of the percentage of time a worker spends performing each block and task in a given year (by province/territory and for Canada as a whole).

Thin-Walled Structures-J.Y. Richard Liew 1998-11-27 Thin-plated structures are used extensively in building construction, automobile, aircraft, shipbuilding and other industries because of a number of favourable factors such as high strength-weight ratio, development of new materials and processes and the availability of efficient analytical methods. This class of structure is made by joining thin plates together at their edges and they rely for their rigidity and strength upon the tremendous stiffness and load-carrying capacity of the flat plates from which they are made. Many of the problems encountered in these structures arise because of the effects of local buckling. The knowledge of various facets of this phenomenon has increased dramatically since the 1960s. Problem areas which were hitherto either too complex for rigorous analysis or whose subtleties were not fully realized have in these years been subjected to intensive study. Great advances have been made in the areas of inelastic buckling. The growth in use of lightweight strong materials, such as fibre-reinforced plastics has also been a contributory factor towards the need for advances in the knowledge of the far post-buckling range. The conference is a sequel to the international conference organised by the University of Strathclyde in December 1996 and this international gathering will provide the opportunity for discussion of recent developments and trends in design of thin-walled structures.

Walker Evans, Cuba-Walker Evans 2001 "As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beal's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.
